

## Documentation Requirements

We will follow some simple rules to document your academic programs:

- Put your name, the date, and the assignment name/number as a comment toward the top of each source code file.
- State the purpose of the code in one short sentence or phrase, once again as a comment near the top of each course code file.
- Use descriptive variable names and method names.
- Add comments when the purpose of the code is not clear. Usually, this means a comment for each block of code in your program, but you can add more comments when necessary.
- Give credit to the original source of the code if you borrow code from elsewhere. Otherwise, it is plagiarism, which is a very bad thing.
- Refer to the Academic Honesty Policy section at [Bellevue University Policies](#) to learn more about BU's Plagiarism policy.
- Cite your sources. Give credit to the original source of the code if you borrow code from elsewhere, or if you have it generated for you by an AI.

And a few formatting suggestions:

Leave blank lines between main sections of your code. Think of sections of code as paragraphs in an essay. Leave a blank line between each main idea. Properly indent blocks of code.
